

SUMMARY

DevOps engineer with 1.5+ years running **Kubernetes-based production platforms** for 20–25 live smart-city and IoT projects. I deploy and validate releases with **ArgoCD and Helm**, take production and client issues to their root cause, and close security gaps. I lead the company's R&D on a unified observability platform with **OpenObserve** and **OpenTelemetry**, taking services from no visibility to fully traced, alerted and dashboarded, and catching problems at the warning stage before users notice.

20–25 live projects supported on Kubernetes	50 / 50 end-to-end trace checks passed	83 real-time alerts across 45 pipelines	14 platform health dashboards built
---	--	---	---

CORE SKILLS

Kubernetes & delivery	Kubernetes (on-prem & AKS), kubectl, Helm, ArgoCD (GitOps), Calico, RBAC, Docker, Nginx, Linux
Observability	OpenObserve, OpenTelemetry (agent, gateway, Operator), Prometheus, Grafana, VictoriaMetrics, ELK Stack, Alertmanager, Uptime Kuma; Gen AI monitoring (LiveKit, GPU, Langfuse; beginner)
Reliability	Root-cause analysis, distributed tracing, trace-log correlation, SLO-based alerting, incident management (Jira), runbooks
Platforms supported	Kafka, WSO2 ESB / API Manager, Apache NiFi, Trino, Spark, Airflow, Druid, MinIO, Redis
Scripting	Bash, PowerShell, Python, SQL, PromQL

EXPERIENCE

Associate DevOps Engineer — Trinity Mobility Pvt Ltd, Bengaluru

Mar 2025 – Present

Technical Assistance Center (TAC): DevOps support for smart-city and IoT platforms after go-live

Kubernetes & production operations

- Support **Kubernetes production platforms** (on-prem and Azure AKS) for 20–25 live projects, troubleshooting CrashLoopBackOff and OOMKilled pods, **Calico** networking, NFS storage, RBAC and ingress.
- Deploy releases through **ArgoCD and Helm**, review every change with **kubectl diff**, and **validate the full application flow** after each build, server or deployment change, not just pod status.
- Fixed chart-level defects (a wrong NodeAffinity rule, a Service mapped to the wrong port) and pods losing metrics after GitOps syncs; turned each fix into a team runbook.

Client issues & security

- Own client production issues end to end: restore service with clear updates, find every root cause, then make the fix last with **self-healing recovery**, early-warning storage alerts and automation.
- Closed **critical security exposures** on client platforms (exposed domains and services, Nginx hardening) and automated certificate-expiry tracking, **ending recurring escalations**.
- Run severity-based alerting (**70 / 80 / 90%**) across Prometheus, Grafana and ELK; every alert opens a Jira ticket that I fix or drive to closure with the owning team, protecting the company SLO.

OpenObserve R&D: unified observability platform (lead)

- Deployed and stabilised **OpenObserve on Kubernetes**: fixed boot hangs on NFS storage, tuned memory to stop OOM restarts, and kept it running through a major release change.
- Designed the **OpenTelemetry agent + gateway** collection layer (applications push, gateway pulls), removing duplicate ingestion; onboarded Java microservices, WSO2, NiFi, LDAP, IDAM and 13 data-lake engines.
- Enabled **distributed tracing with trace_id in every log line**: 50 / 50 end-to-end trace checks passed, including one trace across six systems for a vendor emergency-incident API that exposed where each call lost time.
- Rebuilt alerting as **45 pipelines and 83 real-time alerts** over 47 health metrics, routed to Telegram and email.
- Built a Grafana **platform overview plus 13 service dashboards** (health, latency, JVM, live alerts) and wrote **20+ guides and runbooks** so the team can run the platform independently.

DevOps Engineer Intern — StarAgile (with IBM)

Apr 2024 – Aug 2024

- Built CI/CD pipelines with Jenkins and Git, provisioned AWS with Terraform and Ansible, and deployed containers on Docker and Kubernetes with Prometheus and Grafana monitoring.

EDUCATION & CERTIFICATIONS

B.E. Mechanical Engineering, Kongu Engineering College, 2019 (CGPA 9.01 / 10) · **Microsoft Certified: Azure Fundamentals (AZ-900)** · IBM DevOps Fundamentals · Languages: English, Tamil, Hindi
