- IBM DevOps Fundamentals

PROFILE

DevOps engineer with 1.5+ years running **Kubernetes** production platforms for 20–25 live smart-city and IoT projects. I lead observability R&D on **OpenObserve** and **OpenTelemetry**, where most of my development work happens, and take client issues to the root cause.

EXPERIENCE

Associate DevOps Engineer

Trinity Mobility Pvt Ltd · Bengaluru · TAC (production support) Mar 2025 – Present

Kubernetes & daily operations

- Run and monitor **Kubernetes** platforms (on-prem, Azure AKS) for 20–25 live projects.
- Deploy releases with **ArgoCD and Helm**; check every change with kubectl diff and **validate the full application flow** after each deploy or server change.
- Watch node, pod and storage health daily, with **70 / 80 / 90%** alerts that open Jira tickets before users are affected.
- Troubleshoot CrashLoopBackOff, OOMKilled, storage and networking issues, and turn each fix into a team runbook.

OpenObserve & OpenTelemetry development (R&D lead)

- Built and run **OpenObserve on Kubernetes** as the company's single platform for logs, metrics and traces.
- Develop **pipelines, VRL functions, alerts and dashboards** in OpenObserve, and automate them through its API.
- Designed **OpenTelemetry agent + gateway** collectors and onboarded Java services, WSO2, NiFi and 13 data-lake engines.
- Enabled trace-log correlation (**trace_id in every log line**); 50 / 50 end-to-end trace checks passed.
- Delivered **45 alert pipelines and 83 real-time alerts**, plus 14 service dashboards.

Client issues & security

- Own client production issues end to end: **restore, find the root cause, then prevent repeats** with self-healing and automation.
- Closed **critical security exposures** (exposed services, Nginx hardening) and automated certificate-expiry tracking.
- Wrote 20+ guides and runbooks that the team uses for training and incidents.

Earlier

DevOps Engineer Intern, StarAgile (with IBM) · Apr – Aug 2024 · CI/CD with Jenkins, AWS with Terraform, Docker and Kubernetes.
